

Notes from 8/9/2019 Call Regarding Task 3 Activities

Task 3

- The general format for the RtC document Cadmus prepares will be a brief summary (about 1 paragraph) of the public comments for each of the 43 topic areas (with some adjustments/additions as per the PWS, e.g., related to ESA and NHPA comments) in the deliverables for the previous WA 94. For each topic area, we will produce a summary response by cutting and pasting in appropriate text from one of the other Dewey-Burdock documents (e.g., fact sheets, EJ document, NHPA) to provide a response. In each such response, we'll indicate which section and which document the content comes from.
- For the mass mailers, we will insert the "form letter text" and briefly summarize any additions/modifications, and will keep detail to a minimum.
- We'll prepare one or two initial examples of the introductory comment summary paragraphs from the substantive comments and send to EPA to discuss.
- One of the public comments (related to the use of hazardous materials) is addressed in the new updated permit – Valois will send the permit.
- We will be alert for comments that are related to the NHPA.
- The new environmental justice analysis is being completed. Valois will send it.
